

# IBM Modern Data Resilience for digital transformation

## Value

- Unified data backup, recovery, retention and reuse for hybrid cloud environments.
- Simple to deploy in containerized or virtualized environments.
- Help reduce storage infrastructure costs with modern storage efficiencies, RBAC, and self-service.

## Performance

- Shorter backup times with near instant recovery.
- Global proactive catalog for rapid RTOs & RPOs.
- Multiple capabilities: Incremental forever, multi-threading, data deduplication.

## Hybrid Cloud & Containers

- Protect Born in the Cloud apps.
- Physical systems, containerized workloads, virtualized systems.
- Deliver your own Backup as a Service.

## Business Agility

- Efficient data reuse for DevOps, analytics and reporting.
- Increased automation with end-to-end SLA-based policies.
- Metadata management, compliance and planning.

## Cyber resilience

- Backup ingest & deduplication anomaly detection.
- Native support for tape and immutable object storage.
- Cyber Incident Response assessment.
